

Sachit

ASPIRING SOFTWARE DEVELOPER & PROMPT ENGINEER

7042846390 | sachit1751@gmail.com | github.com/sachit1751-art | Portfolio: sachin-portfolio.vercel.app

PROFESSIONAL SUMMARY

A recent Class 12 graduate (PCMB, 2028) with a strong technical foundation in Python programming, web development fundamentals, and modern AI tool integration. Having completed all Anthropic Skill Jar developer courses, possess practical knowledge of Claude API deployment, advanced prompt caching, and structured system prompt engineering. Seeking an entry-level technical role, internship, or hackathon team alignment to apply programming foundations and build robust, functional software solutions.

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript, HTML5, CSS3

AI Tools & Automation: Anthropic Claude API, Prompt Engineering (System Prompts, Prompt Caching), OpenAI API, Cursor, Model Context Protocol (MCP)

Web & Backend: Next.js, React, Vite, Supabase, PostgreSQL, Node.js, REST APIs

Development & Version Control: Git, GitHub, VS Code, Command Line, Vercel, Capacitor, Android Studio, Tailwind CSS, Framer Motion

Operating Systems: Windows, Linux (Ubuntu)

PROJECTS

SKY ROMs — Android Custom ROM Discovery & Management Platform (sky-roms.vercel.app)

Technologies: React, TypeScript, Vite, Supabase, PostgreSQL, Vercel, Capacitor, Android Studio, Git/GitHub

- Built and deployed a full-stack React and TypeScript platform for discovering and managing Android custom ROM information, hosted on Vercel with automated routing, SEO sitemaps, and Google Search Console verification.
- Developed a secure Supabase and PostgreSQL backend featuring user authentication, role-based authorization, CRUD operations, and persistent cloud storage, ensuring administrative controls and role assignments are enforced strictly server-side.
- Synchronized the production web application into a native mobile experience using Capacitor and Android Studio, maintaining version control through Git branching workflows.

Nexus Agency Website — Creative Portfolio (zns-nexus.vercel.app)

Technologies: Next.js, React, Tailwind CSS, Framer Motion, Smooth Scrolling (Lenis/GSAP)

- Architected a high-performance creative agency portfolio using Next.js (App Router) and Tailwind CSS, featuring scroll-linked horizontal sections, infinite marquees, and a Vimeo API-driven video showreel.
- Implemented bespoke UI interactions and custom animations, including an interactive cursor, page transitions, and staggered motion components using Framer Motion and smooth scrolling.

MoneyPal — Android Application

Technologies: Kotlin, Jetpack Compose, Android SDK, Room Database, Git

- Engineered MoneyPal as a native Android budget tracker application featuring calculator-style expense entry, flexible budget periods, and automated recurring expense tracking.
- Integrated interactive home screen widgets and a Wear OS companion app for rapid, wrist-based expense logging and real-time budget monitoring.
- Utilized modern Android architecture components including Jetpack Compose for fluid UI design and local Room database persistence for offline-first financial data management.

Audify — Modern Audio Streaming Application

Technologies: React, TypeScript, Tailwind CSS, Web Audio API, Vite, Git

- Developed Audify as a feature-rich, responsive web audio streaming and music player application with fluid playlist controls and real-time track searching.
- Implemented custom audio playback hooks utilizing the Web Audio API for smooth track handling, volume management, and dynamic progress bar scrubbing.
- Configured local storage caching and responsive UI styling to maintain user listening preferences and seamless layout adaptation across desktop and mobile devices.

AI-Powered Model Context Protocol (MCP) Integration Tool

Technologies: Python, Anthropic Claude API, MCP Servers, JSON-RPC

- Configured Model Context Protocol (MCP) server endpoints to allow large language models to securely query local resources and system datasets.
- Implemented clean JSON-RPC messaging handlers to streamline communication between client interfaces and modular backend tools.
- Developed structured context-injection pipelines that give AI assistants direct, real-time access to file systems and development workspaces.

EDUCATION

Central Board of Secondary Education (CBSE)

Class 12 | Stream: PCMB (Physics, Chemistry, Mathematics, Biology)

Graduation Year: 2028

CERTIFICATIONS

- Anthropic Skill Jar – Full Developer Curriculum Completion (Prompt Engineering, Claude API Architecture, Advanced Workflows)

ACHIEVEMENTS

- Successfully mastered 100% of the Anthropic Skill Jar coursework, acquiring verified competencies in advanced generative AI integration.
- Established and maintained an active open-source GitHub footprint containing standalone utilities, MCP integrations, and documented software projects.

LEADERSHIP / EXTRACURRICULAR ACTIVITIES

- Participant, Coding and Technology Hackathons – Collaborated with peers to conceptualize and prototype functional web applications under tight deadlines.
- Active contributor to online technical and developer communities, focusing on optimizing LLM interactions, MCP tool setups, and context window utilization.

LANGUAGES

English (Fluent), Hindi (Native)

INTERESTS

Generative AI Architectures, Open-Source Development, Technical Hackathons
